

HisabDo Internship Bootcamp

Software Quality Assurance (SQA) Track

Day 8 – Capstone Project

(Test Plan)

Submitted By:
Eshal Kamal

Internship Duration:
60-Day Internship Bootcamp

Organization:
HisabDo

Submission Date:
8th August, 2026

1. Scope

The scope of this testing covers the **HisabDo mobile application and website**. The testing will focus on verifying major user flows, navigation, functionality, user interface, usability, compatibility, performance and basic security aspects.

The mobile application testing includes features such as authentication, guest access, dashboard, receivables, payables, transactions, customers, reports, calculator, settings, help, contact and profile management.

The website testing includes the available navigation pages and major user-facing functionality.

2. Testing Objectives

The main objectives of testing are to:

- Verify that the major features work as expected.
- Verify that navigation between screens and pages works correctly.
- Identify functional defects and unexpected behavior.
- Check the usability and user-friendliness of the application and website.
- Verify the consistency and correctness of the user interface.
- Check compatibility across supported devices, screen sizes and browsers.
- Identify performance issues such as slow loading or delayed responses.
- Identify basic security issues and improper access.
- Ensure that existing functionality continues to work after changes or fixes.

3. Features to be Tested

Mobile Application

- App Installation
- Welcome Screen
- Sign In
- Create Account
- Guest Access
- Dashboard
- Receivable Management
- Payable Management
- Transaction Management
- Customer Management
- Add Customer
- Reports
- Calculator
- Settings
- Help & Support
- Contact Us
- Edit Profile

- Application Navigation
- Forms and Validation
- Error Handling

Website

- Home
- About
- App
- Founder
- Leadership
- Blog
- FAQ
- Careers
- Contact
- Privacy Policy
- Navbar Navigation
- Page Navigation and Loading
- UI and Usability

4. Features Not to be Tested

The following areas are outside the scope of the initial testing phase:

- Internal source code and implementation details
- Server and infrastructure configuration
- Database administration
- Third-party services outside the control of HisabDo
- Features that are not currently available or accessible
- Advanced penetration testing
- Extensive load and stress testing
- Internal backend processes that cannot be verified through the user interface

5. Functional Testing

Functional testing will verify whether the features of the HisabDo application and website perform according to their intended requirements.

Testing will cover:

- Authentication and account access
- Guest access
- Dashboard functionality
- Receivable and payable functionality
- Customer and transaction management
- Reports and calculator
- Settings and profile management
- Website navigation
- Forms and input validation

- Error handling

Expected Outcome: All tested features should perform their intended functions correctly and provide appropriate results for valid and invalid inputs.

6. UI Testing

UI testing will verify the visual appearance, layout and consistency of the HisabDo application and website.

The following areas will be checked:

- Buttons and icons
- Text and labels
- Fonts and colors
- Alignment and spacing
- Input fields
- Navigation elements
- Screen and page layouts
- Consistency of UI elements
- Responsive layout of the website

Expected Outcome: UI elements should be visible, readable, properly aligned, consistent, and easy to interact with.

7. Usability Testing

Usability testing will evaluate how easily users can understand and use the HisabDo application and website.

The testing will focus on:

- Ease of navigation
- Clarity of buttons and labels
- Simplicity of workflows
- Ease of completing common tasks
- Clarity of error messages
- Overall user experience

User feedback will also be collected to identify confusing workflows, missing features and suggestions for improvement.

Expected Outcome: Users should be able to navigate the application and website and complete common tasks easily without unnecessary confusion.

8. Compatibility Testing

Compatibility testing will verify that the HisabDo application and website work correctly across supported environments.

Mobile Application

- Different Android devices
- Different screen sizes
- Supported Android versions

Website

- Google Chrome
- Microsoft Edge
- Other supported browsers where available
- Different screen resolutions

Expected Outcome: The application and website should remain functional, accessible and visually usable across supported devices, browsers and screen sizes.

9. Regression Testing

Regression testing will be performed after new changes, updates or bug fixes to ensure that existing functionality has not been affected.

Previously tested features such as:

- Authentication
- Dashboard
- Receivable and payable features
- Customer management
- Transactions
- Reports
- Navigation

will be re-tested after relevant changes.

Expected Outcome: Existing functionality should continue to work correctly after updates or bug fixes.

10. Performance Testing

Performance testing will focus on observing the responsiveness and loading behavior of the application and website.

The following areas will be observed:

- Application launch time
- Screen loading time
- Website page loading time
- Navigation response time
- Form submission response
- Application responsiveness
- Freezing, lagging or unexpected delays

Expected Outcome: Screens and pages should load within a reasonable time and the application and website should respond smoothly without unnecessary delays or crashes.

11. Security Testing

Basic security testing will be performed to identify common security issues from the user perspective.

Testing will include:

- Authentication and login validation
- Password field security
- Unauthorized access attempts
- Session behavior
- Input validation
- Protection of sensitive information
- Access to restricted features

Expected Outcome: Users should only be able to access features they are authorized to use and sensitive information should not be unnecessarily exposed.
