

HisabDo Internship Bootcamp

Software Quality Assurance (SQA) Track

Day 7 – Mini Test Project

(API Test Cases Report)

Submitted By:
Eshal Kamal

Internship Duration:
60-Day Internship Bootcamp

Organization:
HisabDo

Submission Date:
7th August, 2026

API Test Case 1:

Scenario: Verify that the API successfully retrieves all available products.

Attribute	Description
Test Case ID	API-TC-01
API/Endpoint	/api/products
Method	GET
Request	GET https://api.berryfy.org/api/products
Expected Result	The API should return HTTP Status Code 200 OK and a JSON response containing the list of available products with valid product details.
Actual Result	The API returned HTTP Status Code 200 OK with a valid JSON response containing available products. Product details such as product name, price, and category were returned successfully.
Status	Pass

API Test Case 2:

Scenario: Verify that the API successfully retrieves a single product by product ID.

Attribute	Description
Test Case ID	API-TC-02
API/Endpoint	/api/products/{id}
Method	GET
Request	GET https://api.berryfy.org/api/products/8
Expected Result	The API should return HTTP Status Code 200 OK and display the details of the requested product including product ID, name, price, stock quantity and SKU.
Actual Result	The API returned HTTP Status Code 200 OK with the details of the requested product. Product information including ID, name, price, stock quantity and SKU was returned successfully.
Status	Pass

API Test Case 3:

Scenario: Verify that the API handles a request for a non-existent product ID correctly.

Attribute	Description
Test Case ID	API-TC-03
API/Endpoint	/api/products/{id}
Method	GET
Request	GET https://api.berryfy.org/api/products/9999
Expected Result	The API should identify that the requested product does not exist and return an appropriate error response with failure information and error details.
Actual Result	The API returned HTTP Status Code 200 OK. The response body contained isSuccess: false, statusCode: 500, status message "Error retrieving product", and an error detail "An unexpected error occurred".
Status	Pass

API Test Case 4:

Scenario: Verify that the API successfully retrieves products of a specific category by category ID.

Attribute	Description
Test Case ID	API-TC-04
API/Endpoint	/api/categories/{id}
Method	GET
Request	GET https://api.berryfy.org/api/categories/1
Expected Result	The API should return HTTP Status Code 200 OK and display the requested category details with its associated products.
Actual Result	The API returned HTTP Status Code 200 OK with isSuccess: true. Category details and associated products were retrieved successfully. All Postman assertions passed including status code validation, success response, category fields, products list, and product required fields validation.
Status	Pass

API Test Case 5:

Scenario: Verify that a new user can register successfully using valid registration details.

Attribute	Description
Test Case ID	API-TC-05
API/Endpoint	/api/auth/register
Method	POST
Request	POST https://api.berryfy.org/api/auth/register
Expected Result	The API should accept the valid registration details and return HTTP Status Code 201 Created with a successful registration message and newly created user details.
Actual Result	The API returned HTTP Status Code 201 Created with isSuccess: true. The user was registered successfully and the response returned the user ID, username, email and assigned User role. The response also indicated that email confirmation is required.
Status	Pass

API Test Case 6:

Scenario: Verify that the API prevents login when the user's email address has not been confirmed.

Attribute	Description
Test Case ID	API-TC-06
API/Endpoint	/api/auth/login
Method	POST
Request	POST https://api.berryfy.org/api/auth/login
Expected Result	The API should prevent login for a user whose email address has not been confirmed and return HTTP Status Code 403 Forbidden with a clear message indicating that email confirmation is required.
Actual Result	The API returned HTTP Status Code 403 Forbidden with isSuccess: false. The response message stated: "Email not confirmed. Please check your email and confirm your account."
Status	Pass

API Test Case 7:

Scenario: Verify that the API successfully authenticates a user with a confirmed email and valid credentials.

Attribute	Description
Test Case ID	API-TC-07
API/Endpoint	/api/auth/login
Method	POST
Request	POST https://api.berryfy.org/api/auth/login
Expected Result	The API should return HTTP Status Code 200 OK and successfully authenticate the user. The response should contain the user's information, authentication token and refresh token.
Actual Result	The API returned HTTP Status Code 200 OK with isSuccess: true. The response confirmed that the user was logged in successfully and contained the user details, authentication token and refresh token.
Status	Pass

API Test Case 8:

Scenario: Verify that the API rejects login attempts when a valid confirmed email is provided with an incorrect password.

Attribute	Description
Test Case ID	API-TC-08
API/Endpoint	/api/auth/login
Method	POST
Request	POST https://api.berryfy.org/api/auth/login
Expected Result	The API should reject the login attempt and return HTTP Status Code 401 Unauthorized with an appropriate error message. No authentication token should be returned.
Actual Result	The API returned HTTP Status Code 401 Unauthorized with isSuccess: false, statusCode: 401 and the message "Invalid email or password". No authentication token was returned.
Status	Pass

API Test Case 9:

Scenario: Verify that the API rejects login attempts when an unregistered email address is provided with a password.

Attribute	Description
Test Case ID	API-TC-09
API/Endpoint	/api/auth/login
Method	POST
Request	POST https://api.berryfy.org/api/auth/login
Expected Result	The API should reject the login attempt and return HTTP Status Code 401 Unauthorized with an appropriate error message. No authentication token should be returned.
Actual Result	The API returned HTTP Status Code 401 Unauthorized with isSuccess: false. An appropriate error message was provided and no authentication token was returned. All Postman assertions passed successfully.
Status	Pass

API Test Case 10:

Scenario: Verify that the API validates the login request when the email field is left empty.

Attribute	Description
Test Case ID	API-TC-10
API/Endpoint	/api/auth/login
Method	POST
Request	POST https://api.berryfy.org/api/auth/login
Expected Result	The API should reject the request with HTTP Status Code 400 Bad Request and provide validation errors indicating that the email is required or has an invalid format. No authentication token should be returned.
Actual Result	The API returned HTTP Status Code 400 Bad Request with validation errors indicating "Email is required." and "Invalid email format." No authentication token was returned.
Status	Pass

API Test Case 11:

Scenario: Verify that the API validates the login request when the password field is left empty.

Attribute	Description
Test Case ID	API-TC-11
API/Endpoint	/api/auth/login
Method	POST
Request	POST https://api.berryfy.org/api/auth/login
Expected Result	The API should reject the request with HTTP Status Code 400 Bad Request and provide a validation error indicating that the password is required. No authentication token should be returned.
Actual Result	The API returned HTTP Status Code 400 Bad Request with the validation message "Password is required." No authentication token was returned.
Status	Pass

API Test Case 12:

Scenario: Verify that the API validates the login request when both email and password fields are left empty.

Attribute	Description
Test Case ID	API-TC-12
API/Endpoint	/api/auth/login
Method	POST
Request	POST https://api.berryfy.org/api/auth/login
Expected Result	The API should reject the request with HTTP Status Code 400 Bad Request and provide validation errors indicating that the email and password are required. No authentication token should be returned.
Actual Result	The API returned HTTP Status Code 400 Bad Request. Validation errors were returned for both fields: "Email is required.", "Invalid email format." and "Password is required." No authentication token was returned.
Status	Pass

API Test Case 13:

Scenario: Verify that the API successfully retrieves the order history of an authenticated user.

Attribute	Description
Test Case ID	API-TC-13
API/Endpoint	/api/orders/user/{userId}
Method	GET
Request	GET https://api.berryfy.org/api/orders/user/10
Expected Result	The API should return HTTP Status Code 200 OK and successfully retrieve the authenticated user's order history. The response should contain order details such as order ID, user ID, status, subtotal, tax, total amount, customer information, shipping details and order items.
Actual Result	The API returned HTTP Status Code 200 OK with isSuccess: true and the message "User orders retrieved successfully". The response contained the user's order history, including order ID, user ID, subtotal, tax amount, shipping amount, total, customer email, shipping details, reference number and order items with product names, quantities and prices.
Status	Pass

API Test Case 14:

Scenario: Verify that the API successfully retrieves the currently active shopping cart for the authenticated user.

Attribute	Description
Test Case ID	API-TC-14
API/Endpoint	/api/shopping-carts/current
Method	GET
Request	GET https://api.berryfy.org/api/shopping-carts/current
Expected Result	The API should return HTTP 200 OK and retrieve the current shopping cart associated with the authenticated user, including cart ID, status, cart items, coupons, subtotal, discount, tax and total.
Actual Result	The API returned HTTP 200 OK with isSuccess: true and the message "Current cart retrieved successfully". Cart ID 15414 was returned for user ID 10. The cart contained no items or coupons, and the subtotal, discount, tax and total were all 0.
Status	Pass

API Test Case 15:

Scenario: Verify that a product can be successfully added to the user's shopping cart.

Attribute	Description
Test Case ID	API-TC-15
API/Endpoint	/api/shopping-carts/add-item
Method	POST
Request	POST https://api.berryfy.org/api/shopping-carts/add-item
Expected Result	Product should be successfully added to the shopping cart, and the API should return the updated cart details and totals.
Actual Result	API returned 200 OK with "isSuccess": true and "Item added to cart successfully". The response contained the added cart item, product details, quantity, unit price and updated cart totals.
Status	Pass

API Test Case 16:

Scenario: Verify that the quantity of an existing item in the shopping cart can be updated successfully.

Attribute	Description
Test Case ID	API-TC-16
API/Endpoint	/api/shopping-carts/{cartId}/update
Method	PUT
Request	PUT https://api.berryfy.org/api/shopping-carts/15414/update
Expected Result	The quantity of the selected cart item should be updated successfully and the API should return the updated cart details with recalculated totals.
Actual Result	The API returned 200 OK with "isSuccess": true and the message "Item quantity updated successfully". The selected cart item was returned with the updated quantity and the cart totals were recalculated.
Status	Pass

API Test Case 17:

Scenario: Verify that an existing item can be successfully removed from the shopping cart.

Attribute	Description
Test Case ID	API-TC-17
API/Endpoint	/api/shopping-carts/{cartId}/remove/{productId}
Method	DELETE
Request	DELETE https://api.berryfy.org/api/shopping-carts/15414/remove/10
Expected Result	The selected item should be removed from the shopping cart successfully. The API should return a successful response confirming that the item was removed.
Actual Result	The API returned 200 OK with "isSuccess": true and the message "Item removed from cart successfully". The response data returned true, confirming successful removal.
Status	Pass

API Test Case 18:

Scenario: Verify that an authenticated user can successfully log out using the logout API.

Attribute	Description
Test Case ID	API-TC-18
API/Endpoint	/api/auth/logout
Method	POST
Request	POST https://api.berryfy.org/api/auth/logout
Expected Result	The API should successfully log out the authenticated user and return a successful response with an appropriate confirmation message.
Actual Result	API returned 200 OK with isSuccess: true and the message "Logged out successfully".
Status	Pass
