Mobile App Bug Reports

Bug Report 01:

Attribute	Details
Bug ID	BUG-01
Test Case ID	TC-08
Module	Authentication
Bug Title	Account can be created using an already registered email address.
Severity	High
Priority	High
Environment	HisabDo Mobile Application
Precondition	A confirmed account already exists with the email address.
Steps to Reproduce	1. Launch the HisabDo mobile application on the device. 2. From the welcome screen select the Create Account button to open the account creation page. 3. In the Email field, enter an email address that is already registered and confirmed with an existing HisabDo account. 4. In the Password field, enter a valid password that meets the application's password requirements. 5. In the Confirm Password field, enter the same password to ensure both password fields match. 6. Review the entered information and verify that the registered email address, valid password and matching confirm password are correctly entered. 7. Tap the Create Account button to submit the account creation form. 8. Observe the application response after submitting the form and check whether the system rejects the already registered email address or proceeds with account creation.
Expected Result	Account creation should be rejected and an appropriate message should indicate that the email address is already registered.
Actual Result	The app proceeded as if the account was newly created even though the email address was already registered.
Status	Open
Bug Type	Functional / Validation Defect

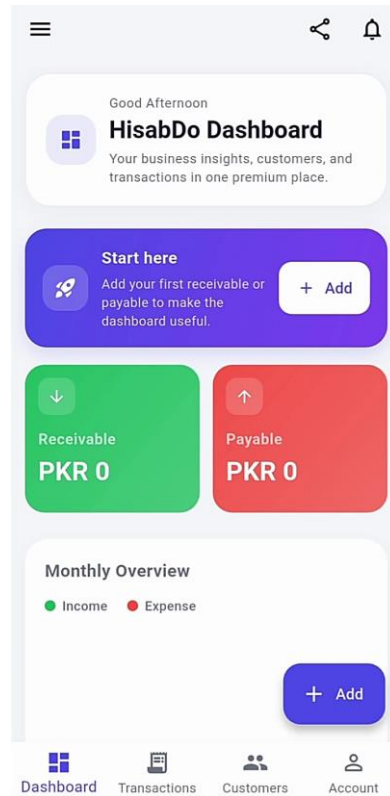

Bug Report 02:

Attribute	Details
Bug ID	BUG-02
Test Case ID	TC-18
Module	Password Recovery
Bug Title	Password reset page fails to load from the reset link
Severity	High
Priority	High
Environment	HisabDo Mobile Application
Precondition	A registered account exists and a password reset link has been received through email.
Steps to Reproduce	1. Open the email account associated with the registered HisabDo account. 2. Locate and open the password reset email received from HisabDo. 3. Review the email and locate the password reset link provided in the message. 4. Tap the password reset link to initiate the password recovery process. 5. Wait for the linked page to load in the device's browser. 6. Observe the page displayed after opening the reset link. 7. Verify whether the password recovery page loads successfully and provides the option to reset the account password.
Expected Result	The password reset link should open the password recovery page successfully and allow the user to reset the password.
Actual Result	The reset page failed to load and the site was not available.
Status	Open
Bug Type	Functional / Availability Defect
